Project Design Phase-I

Solution Architecture

Date	20-SEP 2022
Team id	Team ID : PNT2022TMID46746
Project Name	Project – Smart waste management for metropolitan cities.
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions.

Waste bins are being used in an indoor environment by every common man for over many decades. Proper disposal of the waste and the waste collection system in an indoor environment is an important aspect of the cleanliness of the environment, the outlook of the environment, and as well as considering the health aspects of the people.
